

Munitan ME-40

Leather Chemicals / Wet End

Acrylic Retanning Agent

Description

Munitan ME-40 is an acrylic retanning agent for full chrome leathers. It is compatible with synthetic and vegetable tanning agents, fatliquors, anionic dyes and other products.

Specification

Appearance	Transparent Viscose Liquid
Nature	Acrylic
pH (1:10 solution)	6 - 7
Ionity	Anionic
Moisture, %	70 ± 1
Activity, %	40 - 43
Safety	According to the best of our experience, it does not have any harmful effect on health
Packing	200 KG PE Drums or IBC Tanks
Shelf life	1 year

Applications & Recommendations

Munitan ME-40 is applied with other types of Munitans to obtain full and soft leather. If it is combined with Munitan ME-54, more fullness will be obtained.

Munitan ME-40 acts as a very good filling agent for flanks of the skins or hides. Before retannage, the leathers must be neutralized well. In the case of vacuum drying, small dosage of this product at the top, makes the grains very fine and glossy and fixes the other chemicals.

The dosage of consumption depends on the type of the leather and varies between 2-3% (based on the shaved weight).

After Neutralization:

80%	Water	35°C
X%	Dye	45-60 min
1-1.5%	Munitan ME-40	
2-3%	Rockytan RE-540	30 min
+ Other retanning agents		

For better efficiency, after main Fatliquoring:

0.5%	Formic Acid	30 min
1-2%	Munitan ME-40	30 min
0.5%	Formic Acid	30 min

Storage Conditions

The product should be well sealed and must be stored in covered area between 5-25°C. Freezing and direct sun light must be avoided.
