

Munitan ME-60

Retanning

Synton & Auxiliary

Description

Munitan ME-60 is a copolymer retanning agent based on acrylic monomers. It plays a very important role in filling of the loose bellies. **Munitan ME-60** helps to improve buffing characteristic on suede leathers also.

Specification

Appearance	Clear Liquid
Nature	Acrylic
pH (1:10 solution)	7.5 – 8.5
Ionicity	Anionic
Moisture, %	60 ± 1
Activity, %	40 - 43
Safety	According to the best of our experience, it does not have any harmful effect on health
Packing	200 KG PE Drums or IBC Tanks
Shelf life	1 year

Applications & Recommendations

Munitan ME-60 makes leather, very soft and full fill.

Munitan ME-60 is a very good retanning agent for all types of leathers. It has also a great light-fastness property in white crusts. It is notable that before retanning, the leathers must be neutralized well.

The dosage of consumption depends on the type of leather and varies between 1-4% (based on the shaved weight).

After Neutralization:

80%	Water	35°C	
X%	Dye	45-60 min	
1-4%	Munitan ME-60		30min
	+ Other retanning agents		

After Fatliquoring:

1-2%	Munitan ME-60		30 min
------	----------------------	--	--------

Storage Conditions

The product should be well sealed and must be stored in covered area between 5-25°C. Freezing and direct sun light must be avoided.
