Specification

Appearance	Beige Powder
Nature	Phenolic Replacement Syntan
Ionity	Anionic
pH (1:10 Solution)	3.5 ± 0.5
Safety	According to the best of our experience, it does not have any harmful effect on health
Packing	25 KG PE Bags
Shelf life	1 year

Applications & Recommendations

Munitan MOS can be diluted with cold and warm water. It is suitable for all types of leathers. **Munitan MOS** gives almost a white leather with a medium firm handle. As it has low astringency the fine pattern of the grains is preserved.

Munitan MOS imparts a soft handle to the leather and along with the vegetable tannins, it brightens the color of leather. It has a great levelling effect on dyes. Leathers retanned with **Munitan MOS** show a superb buffing and embossing properties. Its filling effect will be better if it is used in combination with resin

tanning materials like **Munitan MR7**.

Our recommendation is to use **Munitan MOS** about 1-4% in retannage of any leather and up to 10% in vegetable tanning.

Storage Conditions

The product should be well sealed and must be stored in covered area between 5-25°C. Freezing and direct sun light must be avoided.
