

Munitan MPR

Retanning

Syntan & Auxiliary

Description

Munitan MPR is a weakly acid, naphthalene based synthetic retanning agent which is used in any type of leather. It has a very good filling effect on loose parts like bellies and shanks and is a lightfast syntan.

Specification

Appearance	Light Brown Powder
Nature	Naphthalene based synthetic
Ionity	Anionic
pH (1:10 Solution)	3 ± 1
Safety	According to the best of our experience, it does not have any harmful effect on health
Packing	25 KG PE Bags
Shelf life	1 year

Storage Conditions

The product should be well sealed and must be stored in covered area between 5-25°C. Freezing and direct sun light must be avoided.

Applications & Recommendations

Munitan MPR imparts the leather a very good filling and is effective in dye penetration if used together with Munitan MR7.

Munitan MPR can be used in neutralization with other neutralizing agents like sodium formate and bicarbonate to decrease the superficial deposition of retanning materials.

The consumption rate varies with the type of leather and is about 1-2% (based on the shaved weight) after neutralization and dye.
